

Hakki Pilke

Eagle Saw bench with screw splitter

The Hakki Pilke Eagle is a simple logging bench with a screw splitter. It consists of a PTO driven circular saw 700mm (28") in diameter which can saw logs up to 250mm (10") in diameter (see image 3). The log to be cut is placed in the hinged trough, which has adjustable support rollers. An adjustable stop enables the user to saw each log to the desired length. The cut logs fall into a collecting tray, from which they can easily be transferred to the 100mm(4") screw splitter (See image 2).

Both the saw and splitter are fully guarded.

A foot operated emergency stop disconnects the drive to both saw and splitter. The screw splitter will make easy splitting once the screw enters the wood. The splitter is available with a tungsten blade as standard. A standard blade can be supplied for less in lieu of the TCT blade. The Eagle is also available with a 10 hp Kohler engine instead of P.T.O drive.
