

Tailor your LumberMate Pro to match your sawmilling needs - now, or later as your milling operation grows.

Blades

Hårkansson Standard Suitable for both soft and Hardwood

Ripper 37™ Longer life blade suitable for Hardwood

Hårkansson HSS Very long life blade 3 - 4 times the normal blade. Suitable for all types of wood including very hard woods

Trailer/Support Jack Package

Tow your Pro from job to job. This package does not have a braked system in place therefore, despite being capable of a high towing speed it is only suitable for slow towing due to regulations in the UK. Package also includes 6 support jacks. *Note: Maximum of one 4-foot bed extension permitted on trailer-equipped model.* (Item No. LM34-41150) Add a pair of support jacks to support optional 4-foot bed extension. (Item No. LM34-SJ2)

Leveling Stands

Ideal for the stationary-model of the LM Pro, sturdy 9"-high stands (22.5cm) deliver solid support and quick-leveling capabilities for faster set-up times. Set includes 10 leveling stands. Add two leveling stands (1/5 set) to support each 4-foot bed extension. (Item No. LM34-41170)

4-Foot Bed Extension

Standard, the LumberMate Pro mills up to 17-feet (3.9m) long. To mill logs 21-feet (5.1m), add one 4-ft (1.2m) extension. To mill 21-feet (6.3m), add two extensions. Mill 41-foot (12.3m) beams with 7 extensions! Each 4-foot extension bolts permanently to the end of the log deck. Additional log rest/dog clamping assemblies sold separately. *Note: Maximum of one 4-foot extension permitted on trailer-equipped model.* (Item No. LM34-41130)

Detachable 2-Foot Bed Extension

Secures to the log deck with quick-connect pins. This optional 2-foot (0.6m) extension lets you mill longer logs without permanently extending your bed. Especially useful to squeeze out extra milling capacity on the trailer-equipped LumberMate. Stow it conveniently out of the way when not in use. Add a second to get 4-feet (1.2m) extra capacity. (Item No. LM34-41140)

Log Loading/Rolling & Ramp Package

A must for milling operations without access to heavy-lift loaders or forklifts. Load large logs onto your LM Pro and hold them in place for quick-dogging. Pass the winch cable over and around the log, connect it to the log deck frame and operate the winch – the log rolls up the ramps onto the bed. Also makes rolling (rotating) the log on the bed a snap – speeds up squaring cants. Package includes two loading ramps, 2-speed 1800 lb. winch, mast/boom & receiver and log-rolling hook. (Item No. LM34-41400)

Saw Carriage Cover

Protect your investment. Made from the same rugged material used for transport-truck covers – they're rip, rot and UV-resistant. Tailored specifically for the LumberMate Pro to fit snugly over the whole carriage and equipped with draw-cords.
(Item No. LM34-41290)

Lap Siding & Shingle Making Package

Make shiplap and cedar-shake siding quickly and easily. With this unique jig, cut lap-siding 7" – 12" (17.5 – 30cm) wide, with taper widths down to a feather-edge. Reconfigure the jigs and make cedar-shake shingles 7" – 12" (17.5 – 30cm) wide and up to 20" (50cm) long – Each pass makes two shingles. Two jigs per set. Tip: To double shingle production, add an extra set.
(Item No. 41270)

Toe Board & Log Repositioning Package

Quickly compensate for log taper and mill true, high-value lumber. Equipped with rollers for easier, faster log repositioning on the log deck. Lateral quick-adjust design so you can locate and lock each toe board directly under the load. Two units per set.
(Item No. LM34-41285)

Logosol Toe Board & Log Repositioning package

Quickly compensate for log taper and mill true, high-value lumber. Equipped with rollers for easier, faster log repositioning on the log deck. One unit per package.

Quick-Click® Indexing Detent Networks

Quickly see your next depth mark. A weight/gravity indicator clicks into detents on specially-calibrated scales available in various standard board-thickness increments.

- Quick-Click® Indexing Detent Network Indicator System (Item No. LM34-DSIND)
- 3/4" Detent Scale (Item No. LM34-DS34S)
- 6/4" Detent Scale (Item No. LM34-DS64S)
- 8/4" Detent Scale (Item No. LM34-DS84S)

Board return system

If your LM Pro is equipped with the remote-controlled power sawhead, you can boost production more by equipping your sawmill with the board return system. When you power the carriage back after making a cut, the steel drag-back fingers firmly and steadily return the board to the head of the mill. Just direct each board into your waiting trailer or lumber pile. (Item No. LM34-PSH-5010)

Rapid-Dogging and Rolling System

If you mill mainly small to mid-sized sawlogs 6" - 16" (15 - 40cm) in diameter, this patented dogging and rolling system is engineered to save you time and hassle. Bolt each of the two dogging/rolling assemblies onto separate cross bunks. You'll find your sawlog, resting right on the smooth-action rollers, is easier to turn – even by hand! Dogging is also faster thanks to the one-handed, single-action log dog clamps designed specifically to handle this mid-size dimension logs. Two units per set. (Item No. 41295)

Log-Dog/Log-Rest Receivers

The LumberMate Pro is equipped with two complete quick connect/ quick-disconnect log-dog/log-rest assemblies. Each log clamping assembly nests securely in receivers permanently installed inside the log deck. Add extra receivers, and move your log clamps to different stations along your mill fast and easy. Each set includes two receivers (enough for one station) plus mounting hardware. (Item No. LM34-DRRCRKIT) Also available, additional complete log dog/rest clamping systems (one log dog/rest station per set). (Item No. LM34-DRKIT)

Lumber Scale Magnets

(9/4", 6/4", 5/4" & 9/8") – Your LumberMate Pro comes standard with a 2", 1" & 3/4" depth-of-cut scale with the kerf already calculated in. To mill specialty-sized 9/4", 6/4", 5/4" & 9/8" lumber, simply install the optional pair of 9/4", 6/4", 5/4" & 9/8" magnetic scales calibrated with kerf allowance. When you want to mill standard lumber again, just peel them off and store them for later use. An optional metric scale set is available to mill 5cm, 4cm & 2cm boards. Each pair includes the primary and secondary scales. (9/4", 6/4", 5/4" & 9/8" Scale: Item No. LM34-LS-94KIT) (5cm, 4cm & 2cm Scale: Item No. LM34-LS-CMKIT)

Board Offloaders

Speed up production, and profits, with a set of board offloaders. Push the fresh-sawn board or slab onto the bunk-mounted offloader rollers, and shoot it down to the end of the bed for fast, efficient unloading and stacking. Quickly retractable so there's zero interference when milling oversized logs and cants. Four roller assemblies per set. (Item No. 41287).

Sharpeners

Quality lumber and saw blade life depend on a sharp blade. The full blade profile should be sharpened at least every couple of hours. Make it convenient for yourself and own your own.

Tooth setter

Teeth naturally lose their set over time which reduces sawmill blade efficiency. It can also cause the blade to dive/climb, or produce wavy or scored boards. Check and restore tooth set at least every 3 sharpenings for efficient, straight and smooth milling. Set your sawmill band blades to mill perfect lumber with Norwood's Tooth Setter. Plunger-style design to accurately and systematically check the set of each tooth before engaging the mechanism to restore the set. Reset an entire blade in less than 15 minutes

AutoMatic Dogging Assist

Most logs are not perfectly round or straight and therefore often have a mind of their own when rotating and clamping them. Norwood's patented AutoMatic Dog Assists tame those kinds of logs by automatically following the log's contours when you rotate the log, and then holding the log firmly exactly where you want it. Streamlines the typical two-handed, two-step dogging process into one smooth and easy step. Norwood is the only company that offers this convenient patented invention. One unit per set. (Item No. 41289)

Manual toe board

Quickly compensate for log taper and mill true with this simple and cost effective tool. The toe board can also be used as a cant hook.
