

HAKKIPIILKE

Eagle

The concept of the Eagle saw bench with splitter has been around for a very long time – cutting timber with a circular saw and dividing it with a splitting cone

The Eagle is designed with operator safety and ease of use a priority. The eagle is suitable for both big and small logs and it is easy to use. The Tungsten blade is 700mm in size capable of cutting just over 10" or 27cms. Available in PTO or three phase electric. You can cut and split the same time. The power requirement is only 15hp.

We have sold hundreds of this saw bench, why not read some of the customer reviews below.

**Mr Wyn Harries,
Eglwysrwrw, Pembrokeshire**

The saw bench is doing what its designed too without any complaint or problems. I would say it is at least three times faster than a chain saw and axe but more importantly far, far safer. The splitter is fantastic and requires little to no effort. All is good.

Mrs. McKane, Capel Iwan, Newcastle Emlyn, Carmarthenshire

"Both my Husband and I think it's fantastic. We use it behind our 18hp Kubota compact tractor, and despite the little power off the PTO we can split and cut the wood simultaneously. We had looked around for a while and failed to find anything that allowed us do both jobs the same time and then we came across the Eagle at the

Pembrokeshire show in 2007. We subsequently saw it at your demonstration day and had to have it. It's well worth the money"

**Peter, P J Gardening Services,
Newquay, Ceredigion**

"I am delighted with my Eagle. I used it for one hour and filled three 1 ton bags"

**Mrs. Jones, Carmel, Llanelli,
Carmarthenshire**

"We have a Rayburn to heat water, run the central heating system and cook in our 3 bedroom stone farmhouse. Prior to buying the Eagle we produced the logs using a chainsaw and logsplitter. We spend about quarter the time producing the logs now with the Eagle than we used to do. I only said to my Husband the other day that it's the best money we have ever spent"
