Timberwolf New Product Press Release

Timberwolf launch a new pack of six powerful Stage V compliant wood chippers.

Building on their market-leading position of designing, engineering and manufacturing wood chippers to meet the demanding arboricultural sector, Timberwolf have launched a new range of 6 inch and 8 inch road tow and tracked machines fitted with emissions-friendly Stage V engines.

The Timberwolf TW 230HB is a direct replacement for the TW 230DHB and TW 230PAHB models, Europe's best selling sub-750kg 6 inch road tow wood chipper range. Available with a 24.8hp Kubota V1505 diesel engine or a 37hp Briggs & Stratton Vanguard V Twin petrol engine, the TW 230HB offers customers the power of choice with the option to choose the fuel type that suits them without compromising on power. All the features that made the TW 230 road tow range hugely popular with arborists remain unchanged: the legendary performance, the easy access to the engine, the wide infeed hopper, the WolfPort for quick blade changes and the large positive feedback infeed controls.

The Timberwolf TW 230HB diesel powered variant is the first diesel powered Stage V compliant wood chipper in its class to remain under 750kg in weight. The Kubota V1505 diesel engine now delivers 24.8hp but with intelligent engineering and design processes, the infeed power has been improved despite the lower engine rpm.

The Timberwolf TW 230HB petrol powered variant has been enhanced with increased ventilation to keep the engine cool and an improved exhaust design. The exhaust system has been designed to sit within the chassis to offer better protection from impacts when travelling over rough ground or road furniture, and a patent pending exhaust diffuser has been introduced, reducing exhaust gas temperatures by up to 150°C.

The Timberwolf tracked wood chipper range has grown with the addition of a petrol variant of the popular 6 inch tracked machine, the Timberwolf TW 230VTR. The introduction of a Briggs & Stratton Vanguard V Twin 37HP petrol engine option ensures the demands of arborists who prefer to use this fuel type are met. The petrol-powered TW 230VTR has been designed to ensure the machine remains perfectly balanced despite the addition of a lighter petrol engine and the stylish ventilated hood ensures the engine bay is kept cool during operation.

The TW 230VTR diesel model is powered by the same reliable Kubota diesel engine used in the TW 230HB models and the hydraulics systems have been upgraded to ensure tracking speed is not compromised by the reduced engine rpm.

The TW 230VTR range has expanded but all the features that gave it the market leading position as the go-to tracked machine for the professional arborist are still there, including the ergonomic ride on platform, the WolfTrack two-speed smooth running tracks, the variable track width and the easily removable hopper which helps the TW 230VTR get through the narrowest of site access points.

The Timberwolf 8 inch tracked wood chipper range has evolved into a petrol-powered pack, with the TW 280FTR fixed track and TW 280VGTR variable gradient tracked wood chippers replacing the existing 8 inch diesel tracked range.

Product Marketing Manager, Antony Alexander, explains, "With Stage V engine legislation adding additional complexity, cost and risk to the high-powered diesel engines commonly used in wood

chippers, we made the decision to switch over to 57hp Kubota WG1605 petrol engines for our 8-inch tracked range.”

“Timberwolf owners love that our machines are easy to maintain, simple and quick to service and very reliable, and changing to a petrol-powered 8 inch tracked range means our customers get exactly what they want at the price they want it. To include a high-powered Stage V diesel engine would result in a product that needed specialist servicing, increased down-time resulting from the Diesel Particulate Filter (DPF) cleaning cycles and high engine temperatures which bring their own risks to the equation. With engines using a DPF there is also the risk of significant engine damage if the wrong grade or contaminated fuel or engine oil is used and we did not want to introduce these issues for our customers.”

With the strength to complete the toughest jobs in the most remote locations, both the Timberwolf TW 280FTR and TW 280VGTR feature a low vibration and ergonomically designed ride-on platform with simple to operate tracking controls for ultimate operator comfort and safety. An extra-wide feed funnel with an open top section combine to provide users with better visibility and ease of feeding, whilst the class-leading 280mm by 210mm in-feed aperture can process over 7 tonnes of material per hour. There’s also Timberwolf’s legendary ‘no-stress’ auto-feed control for smooth operation, combined with a heavier rotor providing added inertia to get the job done quicker.

The Timberwolf TW 280FTR uses the WolfTrack Fixed Track Dual Speed Tracking System, featuring a low speed gear to negotiate difficult terrain and a higher speed gear to cover distance efficiently. The TW 280FTR has a ground clearance of 245mm to tackle uneven surfaces and its wide, smooth running tracks and low centre of gravity enhances stability on different gradients. In short, this machine will get you there safely and fast!

The TW 280VGTR features the innovative WolfTrack variable gradient tracking system. Using heavy duty twin arms to support each of the wide, smooth running tracks, the operator has dynamic control over track width, ground clearance and machine tilt angle providing greater control and comfort, particularly whilst navigating uneven and sloping ground up to 30 degrees.

When purchasing a Timberwolf wood chipper, owners are buying more than a machine.

All Timberwolf wood chippers come with a three year no-nonsense warranty as standard, which can be extended up to an industry-leading 5 year warranty for complete peace of mind.

Timberwolf Finance offers specialist finance packages, designed specifically for the needs of the arboricultural industry.

Every Timberwolf owner has access to over 250 Timberwolf trained technicians and a network of 34 dealer depots across the UK, ready to offer expert advice as well as spares and technical support.

Timberwolf Company Overview

Leading the Pack for over 30 Years

Timberwolf specialises in the manufacture of professional wood chippers. We have come a long way since our first chipper was introduced over 30 years ago. Today and over 13,000 machines later, Timberwolf has succeeded in becoming the largest seller of commercial wood chippers in Europe and continues to grow globally.

Unparalleled experience and value for money

With our innovative research and design process we continue to set new levels of performance and quality within the industry. Leading performance and highest residual value makes Timberwolf the undisputed best value for money chipper on the market.

The Wolves are out there

Timberwolf provides the highest quality of service via a committed dealership network throughout the UK and Europe. All our dealers can provide local expert advice and support, quickly and efficiently, as and when required.
